

# High-Speed Data Transfers

Tusker, Crane and Sandhills each have a dedicated transfer server with 10 Gb/s connectivity (Sandhills currently limited to 1 Gb/s) that allows for faster data transfers than the login nodes. With [Globus Connect](#), users can take advantage of this connection speed when making large/cumbersome transfers.

Those who prefer scp, sftp or rsync clients can also benefit from this high-speed connectivity by using these dedicated servers for data transfers:

For Tusker transfers, use:

For Crane transfers, use:

For Sandhills Transfers, use:

`tusker-xfer.unl.edu`

`crane-xfer.unl.edu`

`sandhills-xfer.unl.edu`

Because the transfer servers are login-disabled, third-party transfers between `tusker-xfer`, `crane-xfer` and `sandhills-xfer` must be done via [Globus Connect](#).
